| 6 | X-BLT-M6X6CSB-SS | M6 X 6mm Button Head Socket cap screw SS |
| 1 | X-BLT-M4KHS | M4 Hex Key Short Arm |

**Remove (3)
Plastic Fasteners**

Installation Instructions

1. Open hood, then using a small pick tool, locate and remove plastic fasteners (3 on each side) as shown above holding OEM fender covers onto car.

2. Remove the center portion from each plastic fitting (will require some prying apart of the small “fingers” that hold them in place) then reinstall the lower portion back to the car to hold the fender covers in place.
3. Install supplied longer (with groove on the side) threaded push rivet into the center plastic fitting on each side.

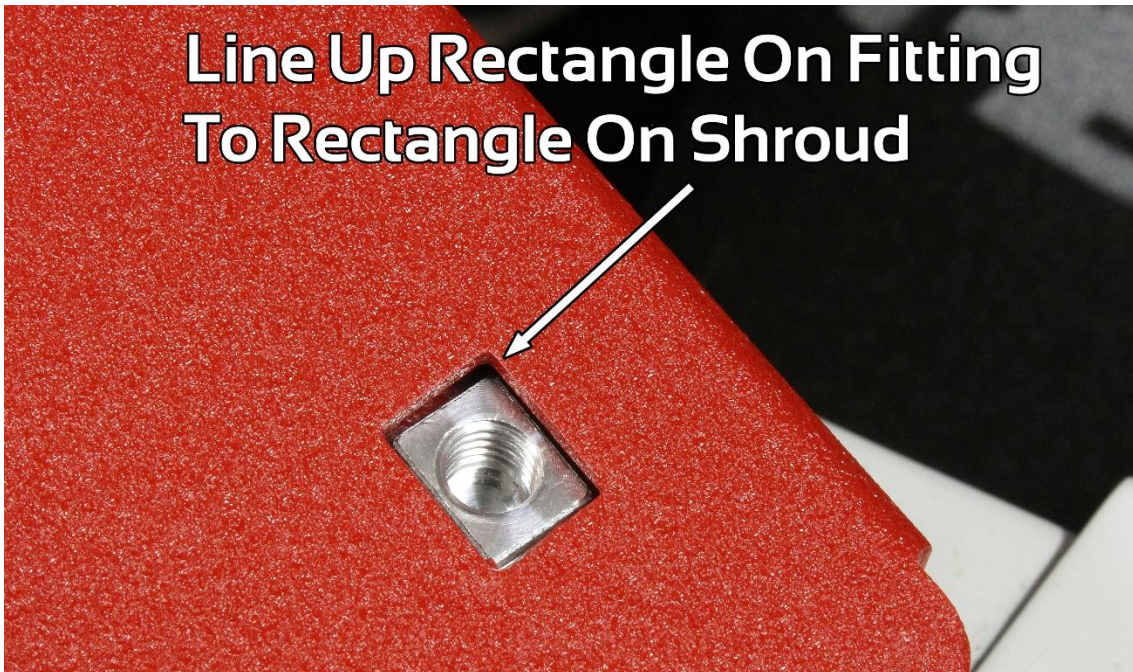

Install Supplied Spacers Into Plastic Fittings

Above picture show the longer threaded push rivet installed into the center plastic fitting

4. Install (4) shorter threaded push rivets into the remaining plastic fittings on both sides of car.
5. Rotate fittings so the longer side is parallel with the length of the car.

Line Up Rectangle On Fitting To Rectangle On Shroud

6. Install fender shrouds onto fittings and push down slightly to get the fittings to line up with the slots in fender shrouds. **NOTE: It is normal to have to compress the OEM rubber shroud down a bit to get them to line up.**
7. Using supplied M6x6 bolt and black washers, secure fender shrouds to the car. Tighten bolts to 5- 8 ft-lbs. **NOTE: As you tighten up the fitting make sure that you are pushing down enough to keep it from rotating.**

8. Slowly close the hood and make sure that the rubber hood bump fits into the hole on shroud. If some adjustment is needed, loosen the screws and move the fender shroud front to back until there is clearance.
9. After a week of driving, recheck hardware to make sure they are still tight.
