Parts List

4	Main Jet	DJ150
4	Main Jet	DJ155
4	Main Jet	DJ160
4	Fuel Needles	DNO228
4	E-Clips	DE0001
8	Adjusting Washers	DW0001
4	Slide Springs	DSP006
1	Slide Drill	DD #52
1	Plug Drill	DD #5/32
1	Screw	DS0001

STAGE ONE INSTRUCTIONS

DYNOJET
2190.001

1. Remove vacuum slides from carbs. Remove stock needles and spacers, noting order of assembly (Fig.A)
2. Using the drill bit provided (DD #52) drill an auxiliary slide lift hole in the position shown in Fig. B. By drilling this auxiliary hole you will get the optimum performance out of this kit. If for any reason you need to go back to stock use JB weld or a similar product to fill up this hole.
3. Install the Dynojet needles on groove #4 from the top. Use all stock spacers. Install the small Dynojet washers above the E-clip (2 per needle). Install the Dynojet slide springs (DSP006) in place of the stock slide springs. After installing the slides in the carbs be sure to check slide movement manually.
4. Remove the stock main jets and replace with the Dynojet main jets provided. If you are running the stock exhaust install the DJ155 main jets. If you are running an aftermarket exhaust or slip-on with high flowing baffle use the DJ160 main jets. Be sure that the jet you are changing is the main jet.
5. Locate the fuel mixture plug (Fig. B). If you see a screw head at Fig. B then proceed to the adjusting procedure. With the 5/32 drill bit provided carefully drill through the plug. **NOTE:** The mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break through. Use screw provided to secure and remove this plug. Carefully turn the mixture screws clockwise until lightly seated, then back out 2 3/4 turns.
