U.S Models Only

1998-99 Yamaha YZF1000 R1

Stage 1

For mildly tuned machines using the stock airbox, with stock or K&N filter. May also be used with a good aftermarket exhaust system. This kit was designed with the EXUP valve retained.

K&N filter #YA-0089

This graph shows a typical gain with a Dynojet jet kit.

4	Adjusting Washers	DW0001
4	Slide Springs	DSP026
4	Needle Springs	DSP77
1	Plug Drill	DD #5/32
1	Screw	DS0001

## STAGE ONE INSTRUCTIONS

**DYNOJET**

4164.003

1. Remove the vacuum slides from the carbs. Remove the stock needles and spacers, noting the order of assembly (Fig. A).
2. Install the Dynojet needles on groove #4 from the top. Use all stock spacers (Fig. A). The small Dynojet washers are for half step increments and do not have to be installed at this time. Install Dynojet slide springs (DSP026) in place of the stock slide springs. **NOTE:** The DSP77 springs do not have to be used, they are supplied in case the stock springs are misplaced. After installing the slides in carbs be sure to check slide movement manually before air box installation.
3. Install the Dynojet main jets provided. If you are running the stock exhaust install the DJ134 main jets. If you are running an aftermarket exhaust or slip-on with a high flowing baffle, use the DJ138 main jets. Be sure that the jet you are changing is the main jet.
4. Locate the fuel mixture plug (Fig. B). If you see a screw head at Fig. B proceed to adjusting procedure. With the DD #5/32 drill bit provided carefully drill through the plugs. **NOTE:** The mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break through. Use screw provided to secure and remove this plug. Carefully turn mixture screws clockwise until lightly seated, then back out 3-1/2 turns.
