

Installation Instructions

**Under Seat Storage
Chevy Silverado Crew Cab (2019-2023)**

FIT-USS003

EGR Under Seat Storage is designed to fit specific vehicle makes/models without the optional factory rear storage compartment. Do not use harsh chemicals when cleaning your Under Seat Storage, only use mild soap and water. Test a small area for discolor before cleaning the entire tray.

Hardware Included	QTY
EGR Storage Tray	1

Installation Instructions

Under Seat Storage
Chevy Silverado Crew Cab (2019-2023)

FIT-USS003

STEP 1: Lift up factory rear seat and clear out any loose items/debris. The factory divider will remain folded down for storage tray installation.

STEP 2: Using a 10mm deep socket wrench, remove the two nuts holding down the factory jack and move the jack out of the way for tray installation. You will re-install the jack and nuts at a later time.

STEP 3: Remove the factory lug wrench and set aside. After the tray is installed, this will be the first item stored in your new underseat storage.

STEP 4: Separate the plastic nut from the lug wrench bracket. Press down on the tab pointed to in the top picture and slide plastic screw out.

Installation Instructions

Under Seat Storage
Chevy Silverado Crew Cab (2019-2023)

FIT-USS003

STEP 5: With the jack and lug wrench removed, it is now time to install the storage tray. The factory studs should match up with the pre-made holes.

STEP 6: Re-install the jack on the studs, use your 10mm deep socket and tighten the nuts till they are snug. Do not over-tighten, it could possibly rip the plastic tray. On the opposite side, re-install the plastic nut removed from the lug wrench bracket in previous steps, do not over-tighten.

Installation is now complete. Fold down your rear seats and enjoy your new storage tray.
